USES

A versatile solution for all outdoor spaces

PLACES

Housing
Hotels
Spa
Beach
Parks
Publicsquares
Parking spaces

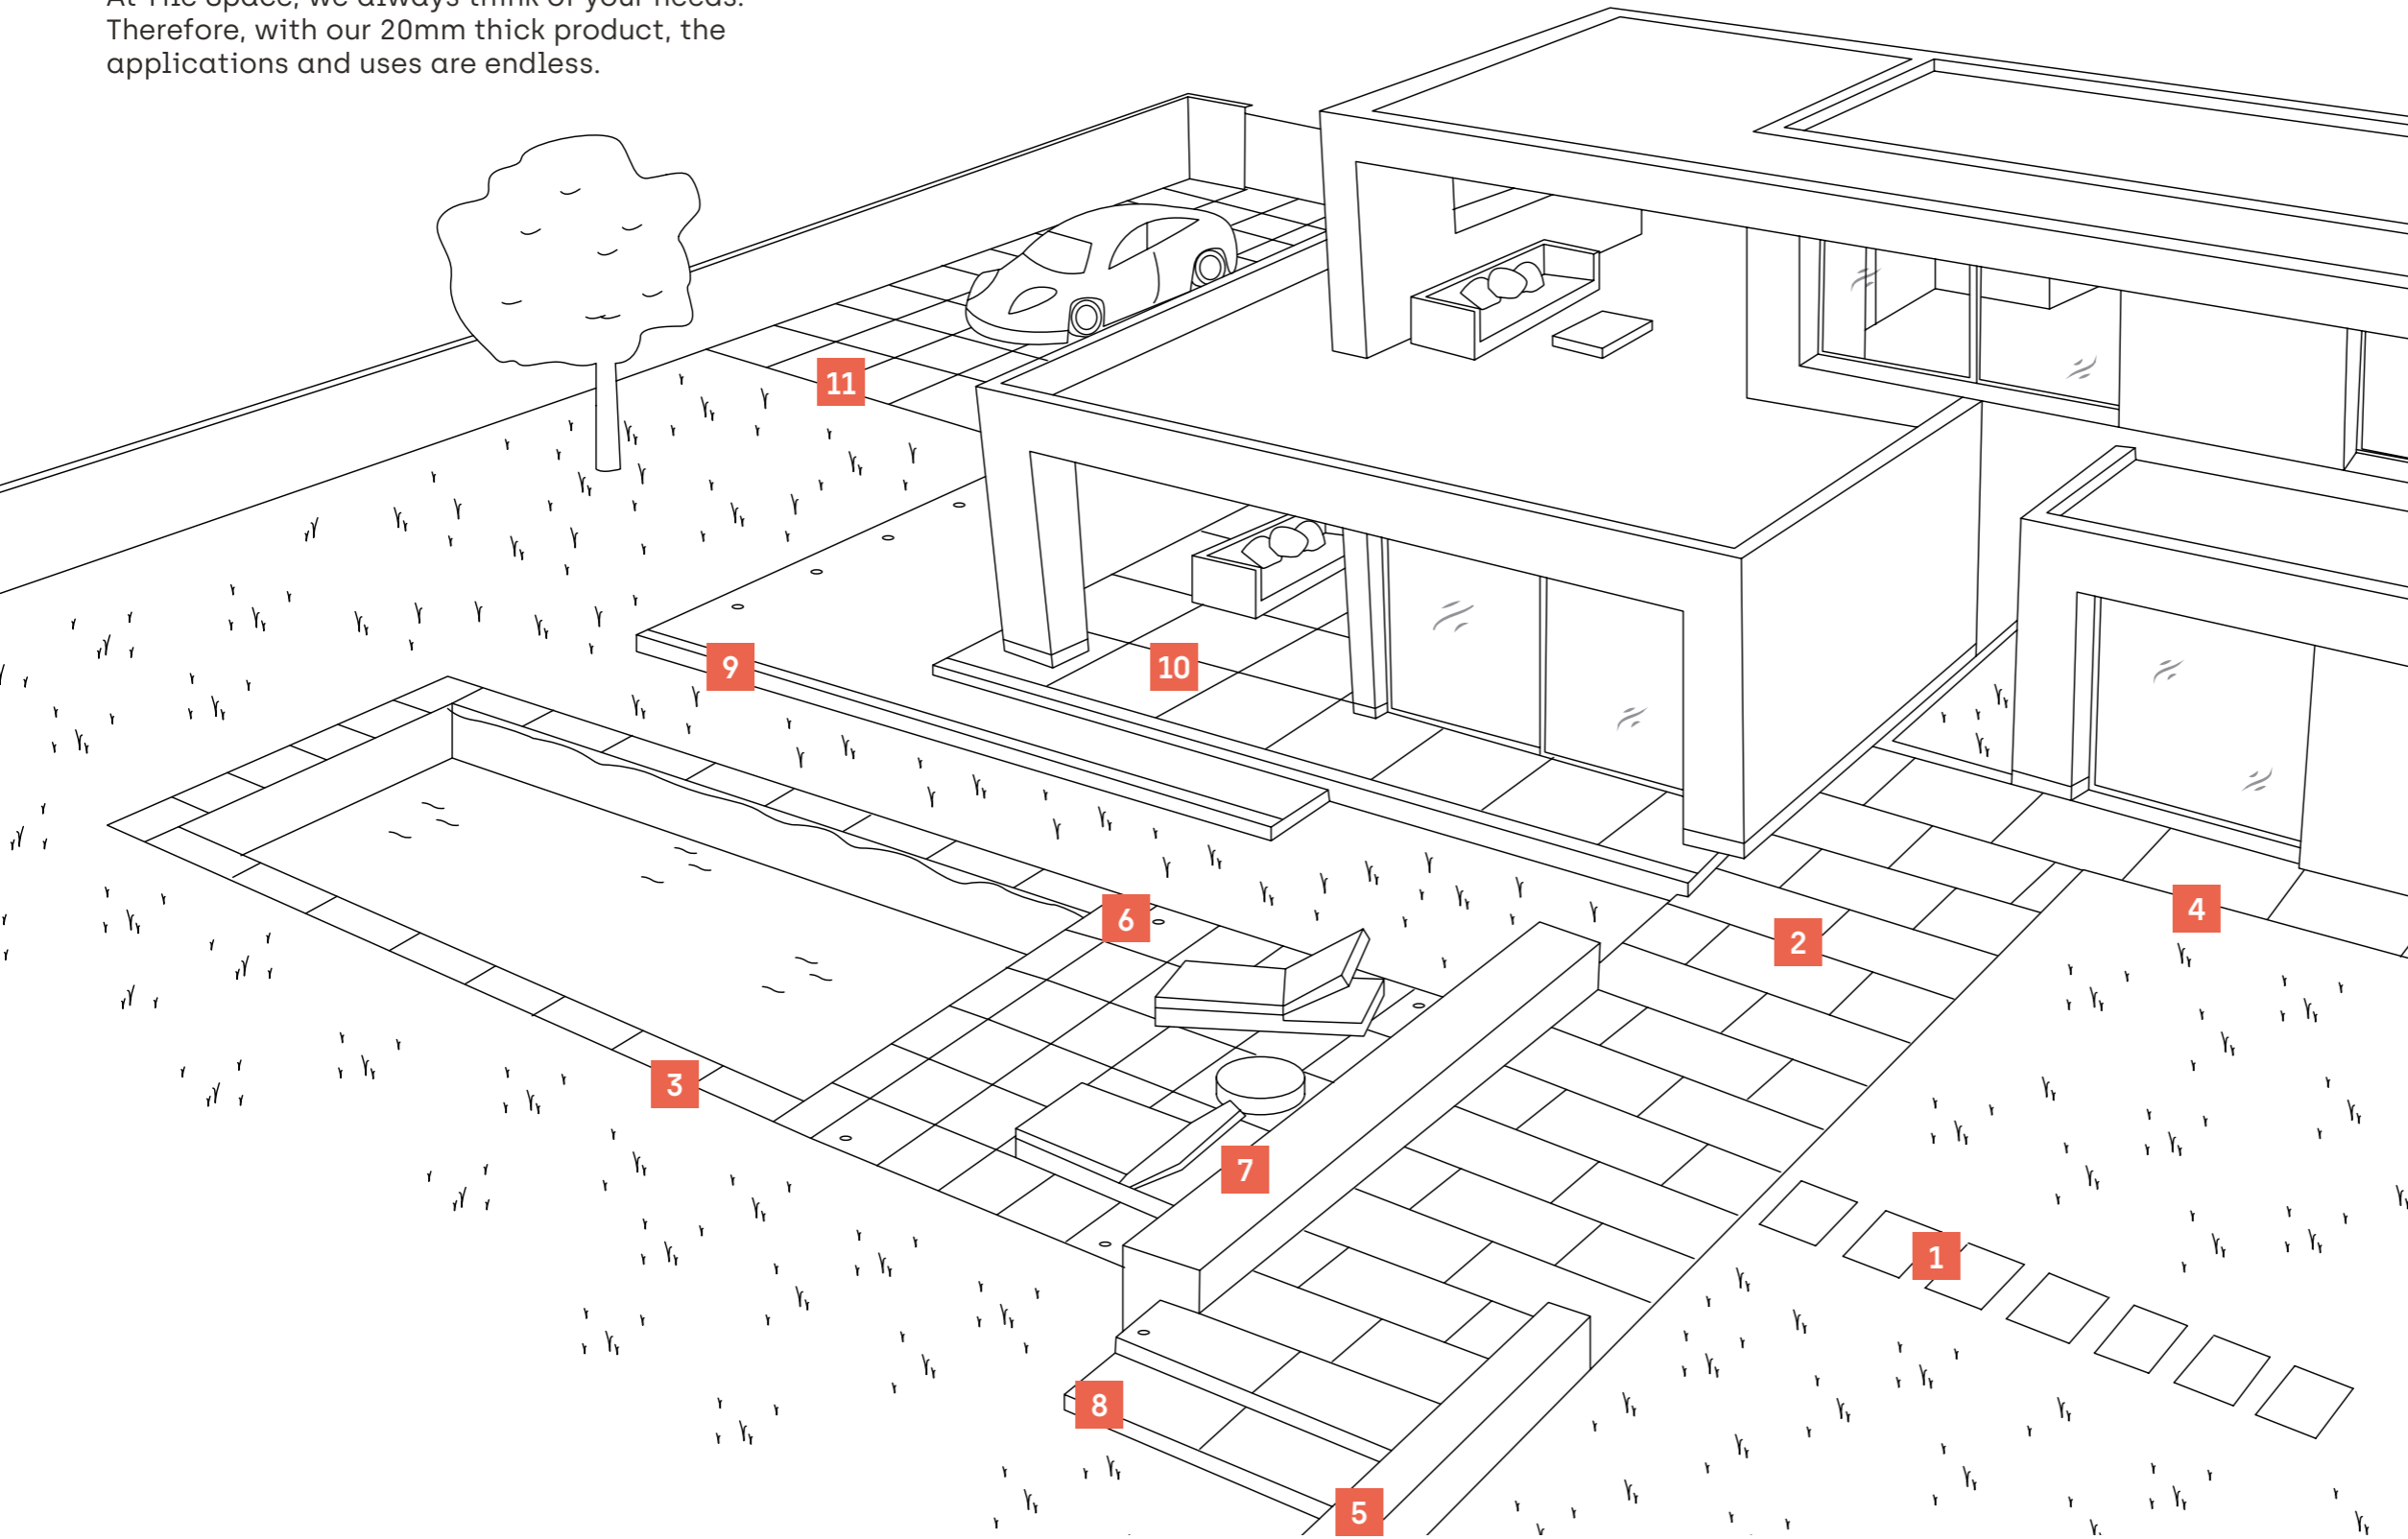

Gardens
Porchs
Paths
Pools
Terraces
Yards
Outdoorstairs

The absolute versatility of **20 mm thickness porcelain stoneware** of Tile Space, allows its use in any **outdoor and indoor places**, both in public and private areas.

USES

One product, for endless possibilities

At Tile Space, we always think of your needs. Therefore, with our 20mm thick product, the applications and uses are endless.

- 1. Path
- 2. Terrace
- 3. Pool
- 4. Skirting
- 5. Wall
- 6. Focus
- 7. Cover
- 8. Steps
- 9. Edge
- 10. Indoor floor
- 11. Parking

Maximum resistance for enduring projects

20 mm thick porcelain stoneware offers **multiple advantages over other traditionally materials.**

Resistant to chemical and cleaning products, and to pool products.

Thermal resistance

Resistant to moss and insects.

Waterproof

Resistant to frost

Fireproof

Stain resistance

Quik and easy installation

Resistance to deep abrasion

Unalterable to the sunlight

Tensile strength

Easy cleaning and care

Crazing resistance

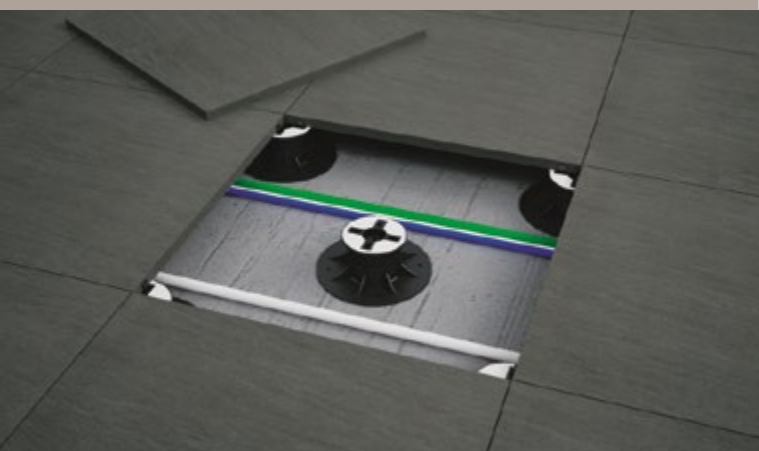

Easy and simple placement with perfect results

Traditional setting

It is the ideal system for pavements with vehicular traffic: parking zones, access roads, paths, ramps, etc. In traditional setting method, always use the floating and buttering method, with cementitious adhesives.

Raised floor

In this system, the ceramic tiles rest on PVC supports or plots, so that between the rigid bottom and the raised floor there is a hole or air chamber. It is the ideal system to give the pavement a high mechanical resistance with the minimum weight.

Dry laying The material weight allows its dry placement, without adhesives and with open joints, just dropping it onto different surfaces.

Dry laying

Setting on grass

For its setting onto grass, it is recommended to cut the grass under each tile and replace it for a stable and level gravel stratum of 3-4 cm thickness, on which you can drop the pieces.

Dry laying

Setting on gravel

For the setting of our 20 mm thick porcelain stoneware onto gravel, make sure you have a stable and leveled gravel surface. If the gravel stratum is of excessive granulometry (from 3 cm thickness), it is recommended to extend an inferior particle size layer of gravel, from 8 to 0,5 mm, and about 5 cm thickness.

Dry laying

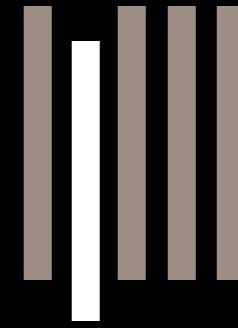

Setting on sand

For placements over a sand surface, make sure that you work over a stable layer of sand that has at least an 8-10cm thickness. Make sure that you level correctly the ground and then place the ceramic tiles accordingly to the desired design and geometry.
